

MEA519

FINAL PROJECT

SAKI HANDA

HOW TO BE A CLIMATE CHANGE HERO

What are you
doing today?

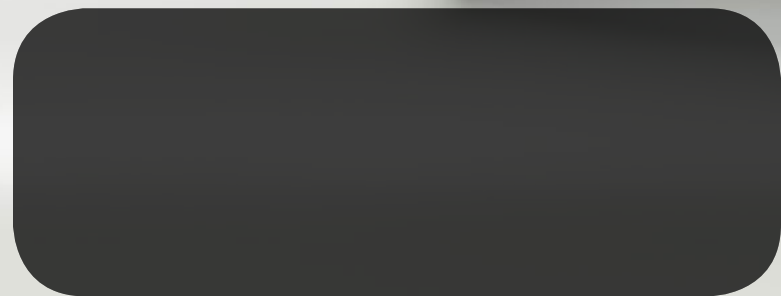

Let's get ready!
How are you going
to brush your teeth?

Using a cup will help save water.

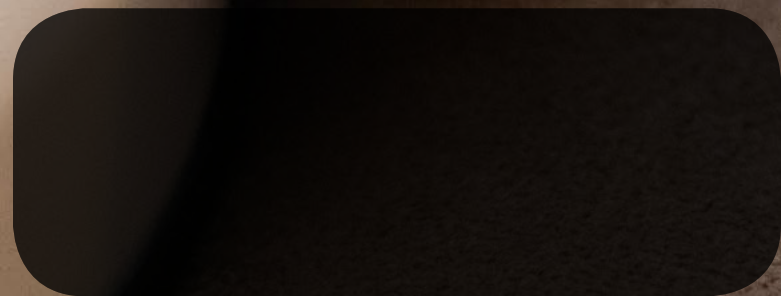

Running the faucet
for 1 minute wastes
6 liters of water.

Let's get dressed!
Don't forget to...

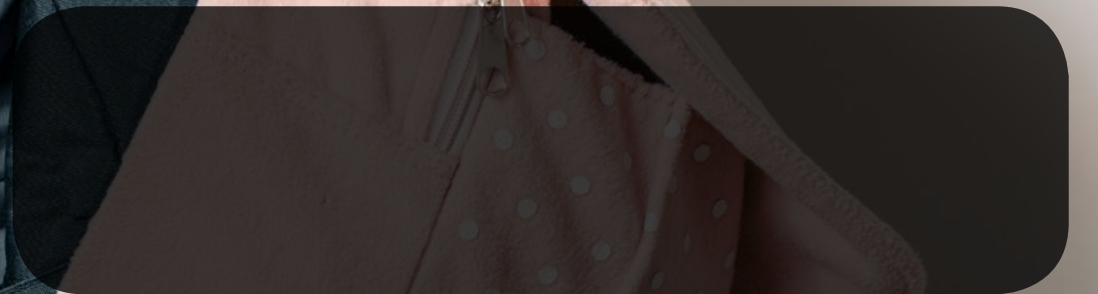

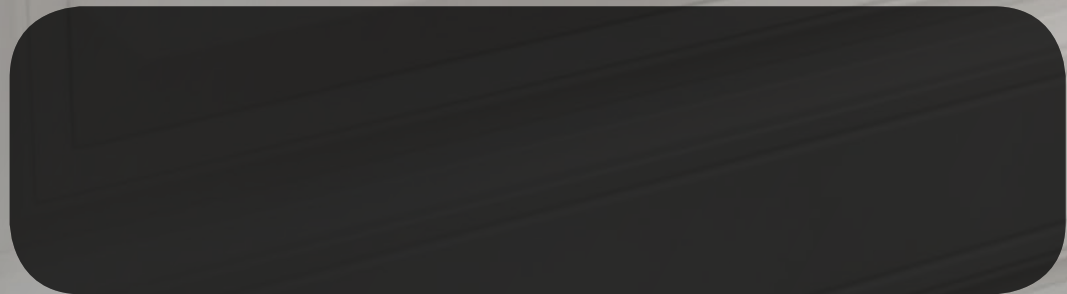

Turning off the light
saves energy.

Leaving the light on
will use energy when
you don't need it.

Let's get going!
How are you
getting to school?

Riding with friends
will help reduce
the air pollution.

More cars on the road means more air pollution.

Let's go to the farm!
What do you see
on the way there?

That's a wind mill!
It uses the wind to
create clean energy.

This building creates energy using fuel that will eventually run out.

We're here, its time
to eat! My favorite
lunch is in...

A reusable lunch box doesn't create any waste.

Throwing away plastic
create trash that will
pollutes the ocean.

Now its time to explore
the greenhouse!

It's really warm in here! Why do you think that is?

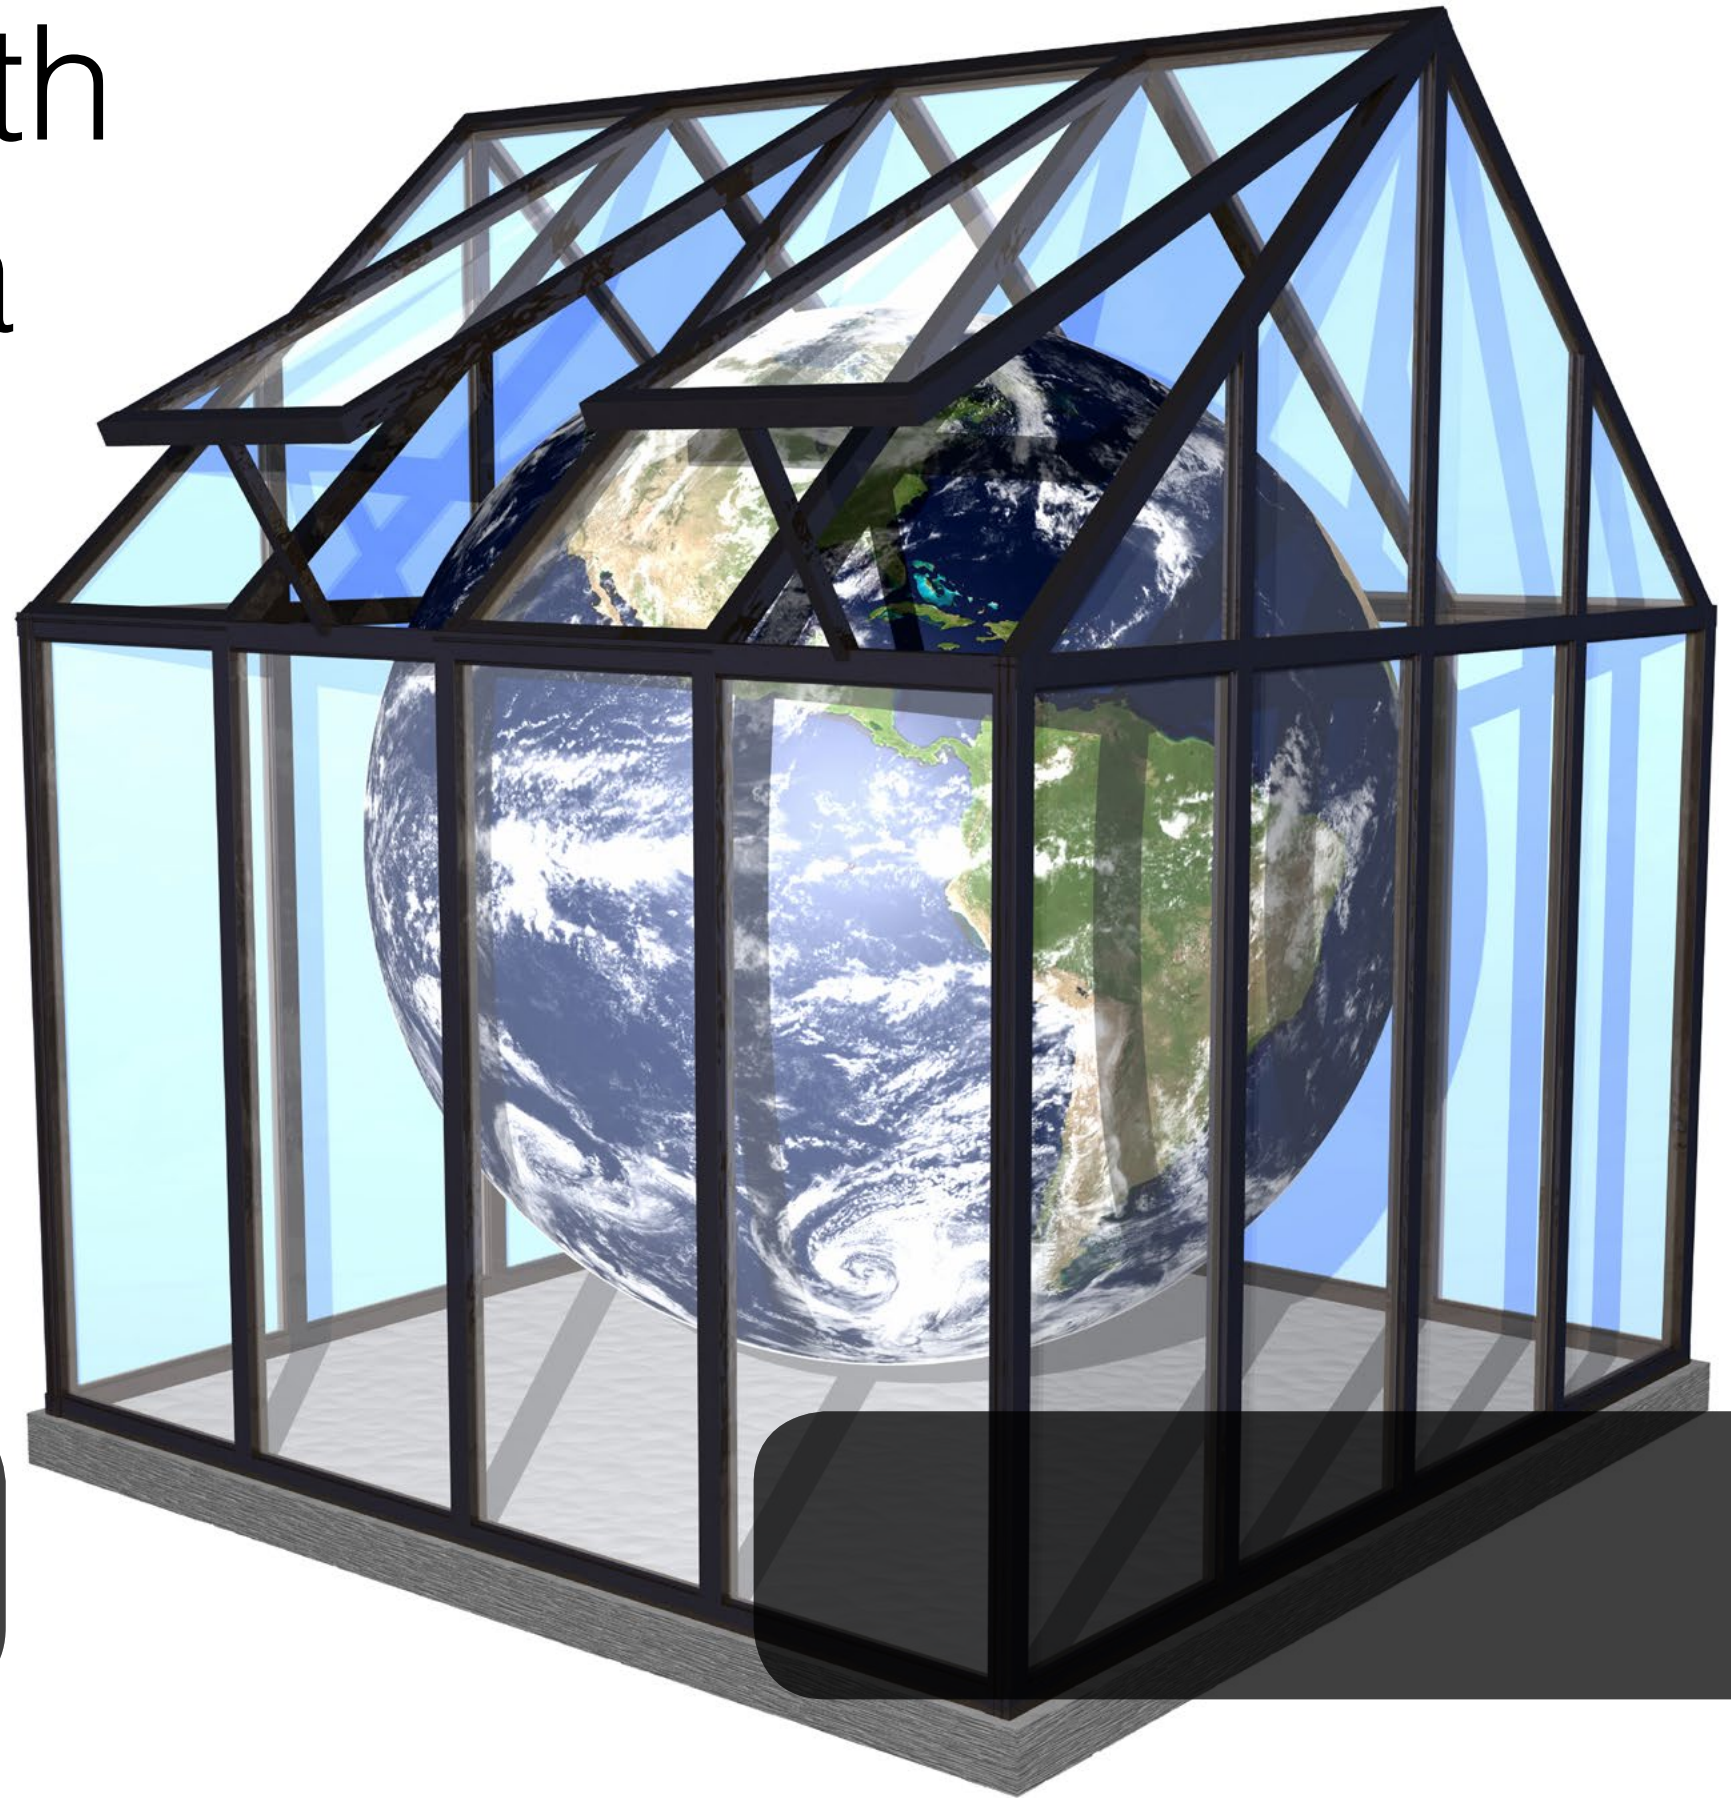

The heat from the sun is trapped inside the greenhouse.

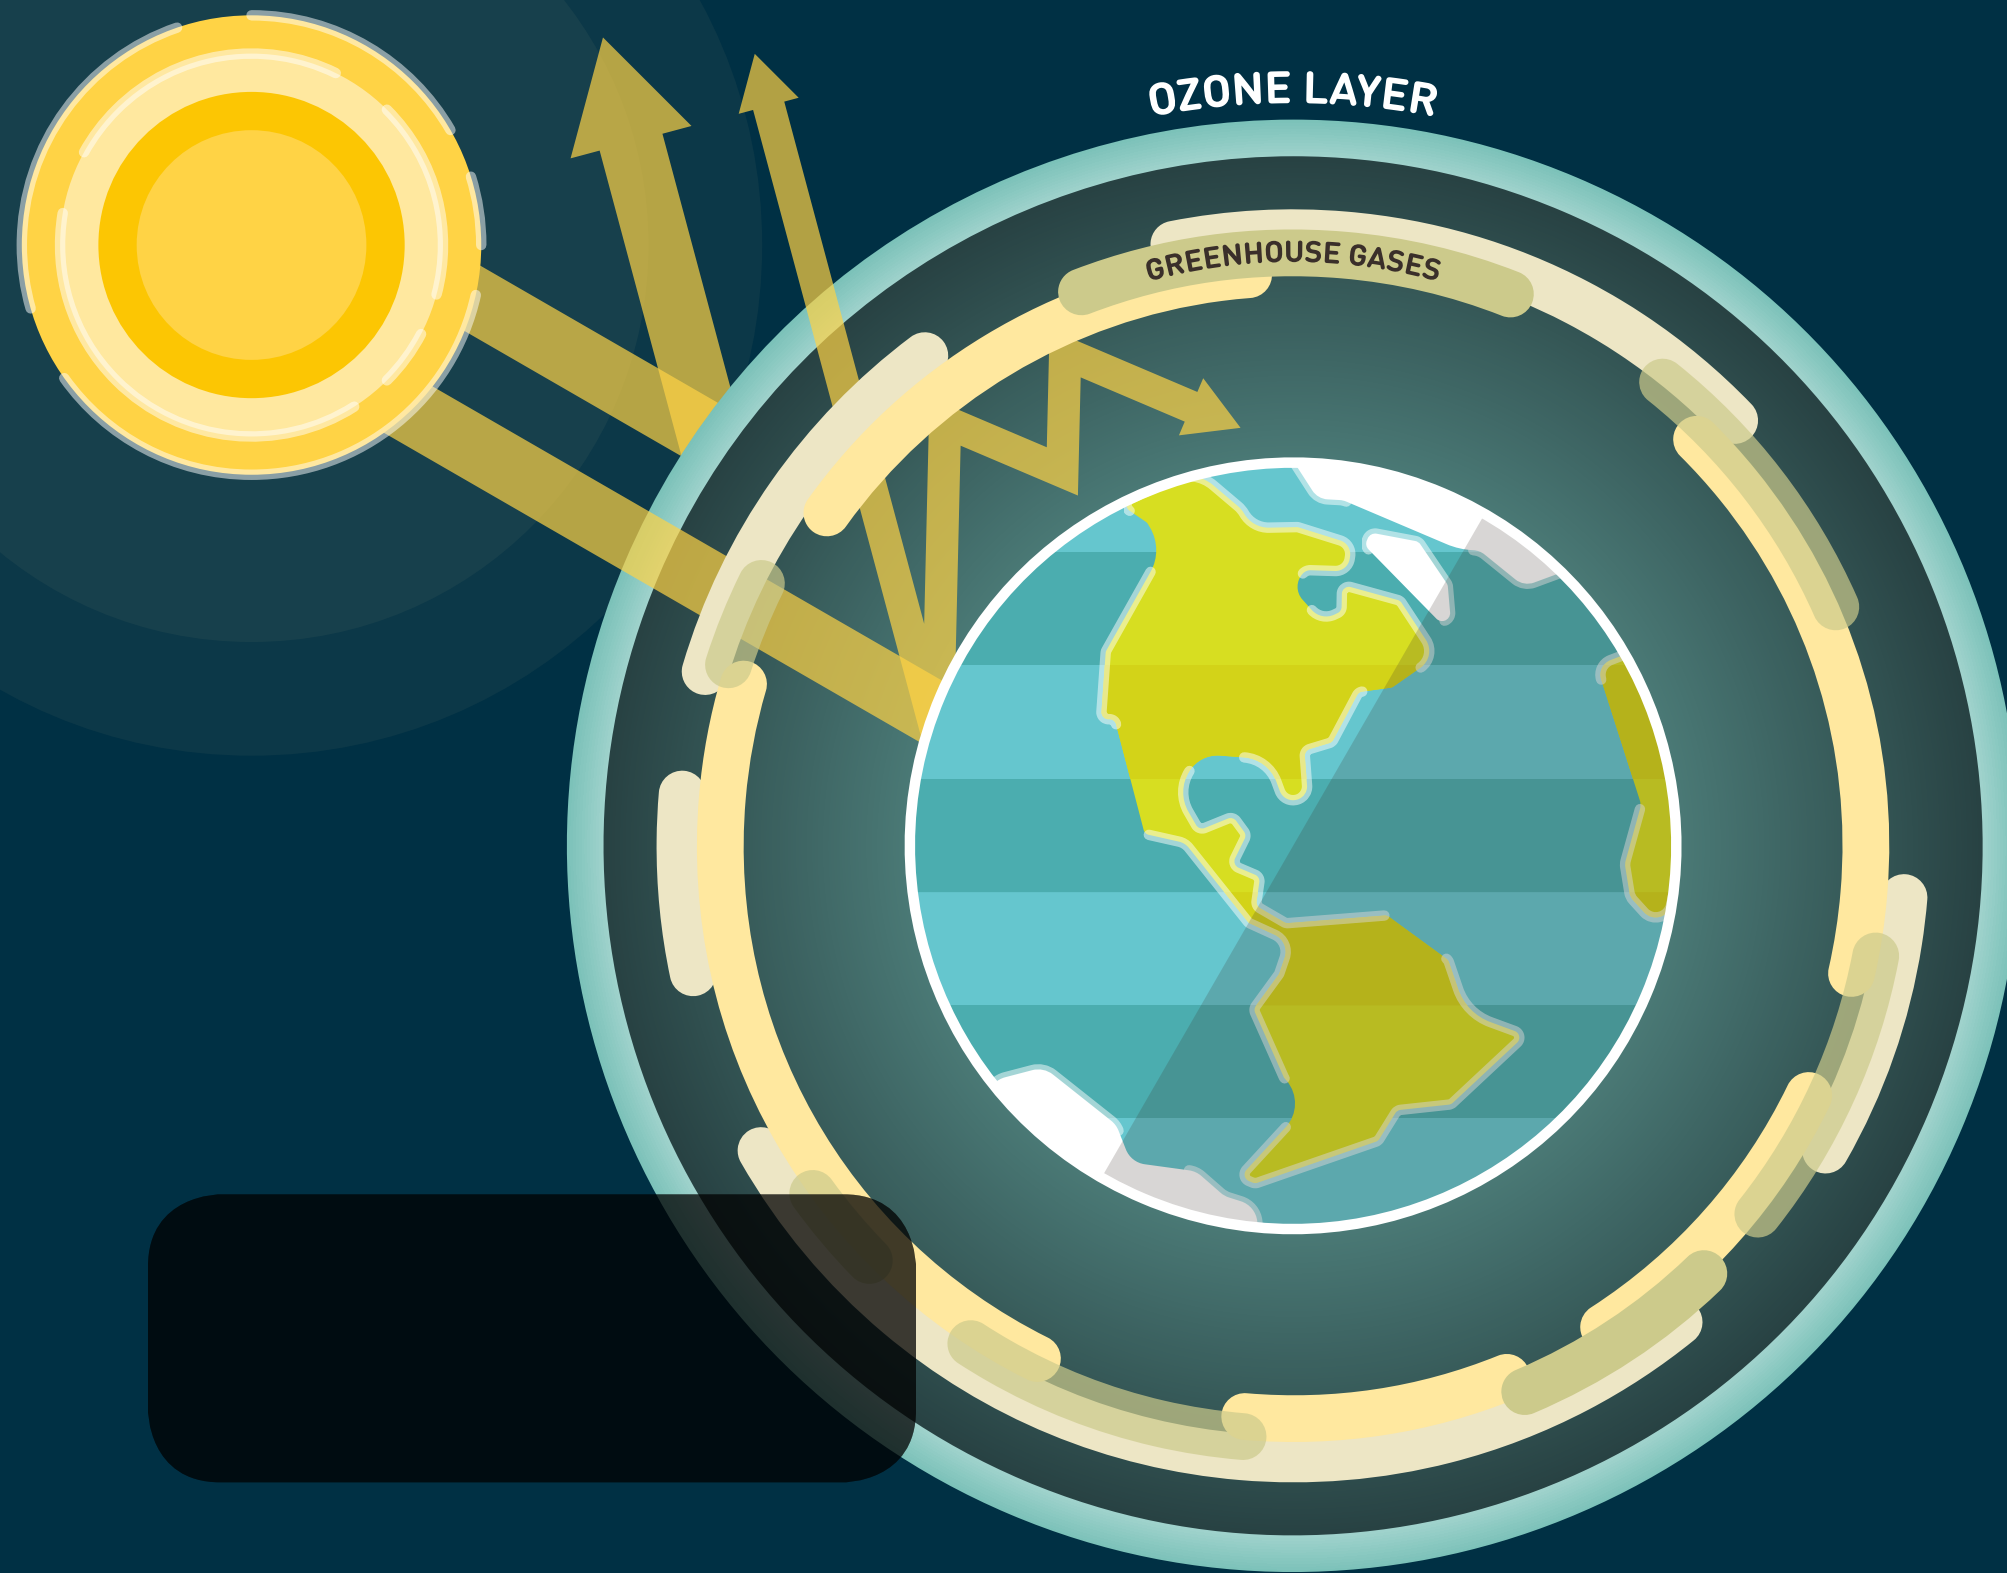

Running a heater all day will waste a ton of energy, but don't we have something for free?

What if the earth
was inside of a
greenhouse?

That is actually happening. The gases around the earth are just like a greenhouse.

This is called Climate Change and it is making the earth sick.

You've learned a lot today! Do you remember all the choices we made?

We brushed our teeth with a cup to save water.

We ate a lunch that didn't have any wrappers.

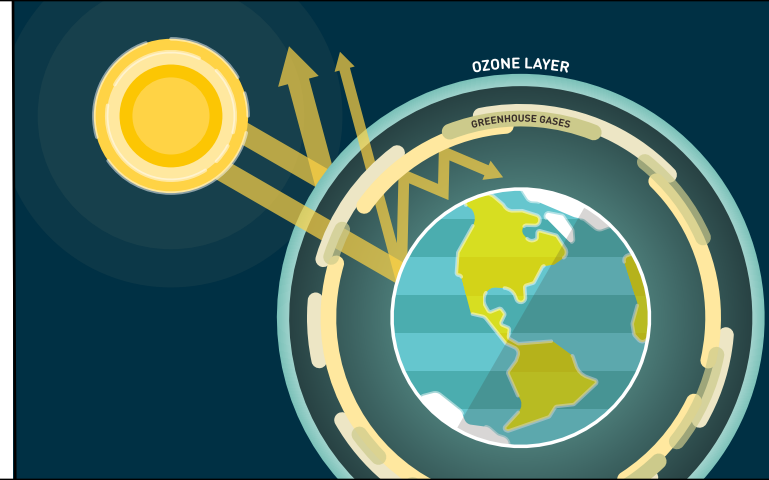

We remembered to turn off the light to save energy.

We learned how a greenhouse traps heat from the sun.

We rode the bus to help prevent air pollution from cars.

We found out the earth is heating up like a greenhouse.

We got to see a wind farm creating clean energy.

We learned getting too hot is making the earth sick.

**Now you're an official
Climate Change Hero!**
